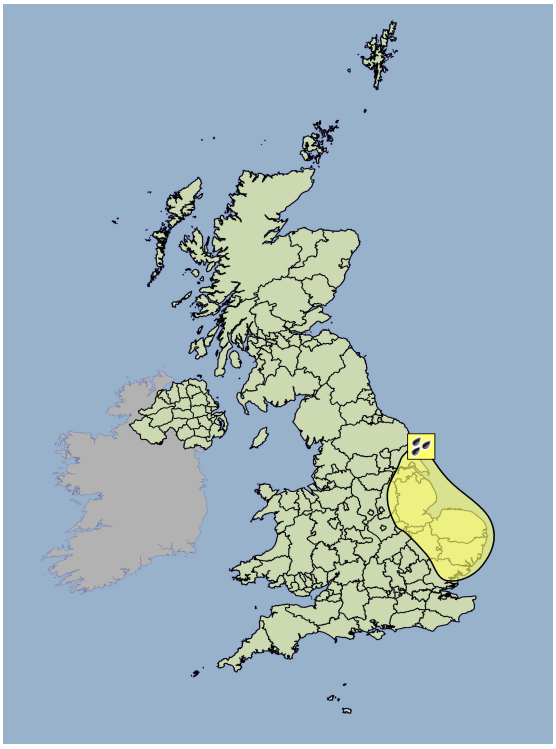
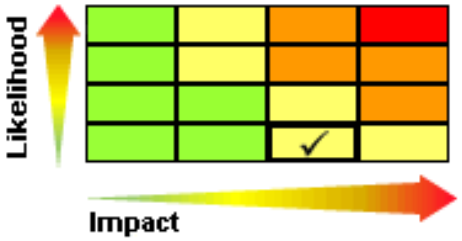
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone developing over the Low Countries will start to spread westwards into the UK later on Monday. This frontal zone is then expected to linger over part of eastern England on Tuesday giving a prolonged spell of rain which could see some eastern parts here seeing more than 30 mm of rain in 24 hours. There is still some uncertainty regarding where the highest accumulations will occur, and the area seeing these very high accumulations is likely to be smaller than the area marked in the alert.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Tue, 27th May 2014** until **23:59 on Tue, 27th May 2014**

A prolonged spell of rain, heavy at times, is expected to affect parts of eastern England during Tuesday. The public should be aware of possible disruption, particularly to travel, and possible localised surface water flooding.
